

NGA assists in Super Typhoon Haiyan disaster recovery

The National Geospatial-Intelligence Agency is assisting the Super Typhoon Haiyan / Operation Damayan recovery and relief efforts in the Philippines with critical geospatial intelligence analysis and reporting. NGA products are providing damage assessments of key infrastructure, roads and communication networks destroyed in the storm.

To access NGA's products, go to the link below to setup a GEOINT online user account to enter NGA's Super Typhoon Haiyan Event Page.

NGA's rapid response and recovery team is working virtually using satellite imagery to provide damage assessments and expert analysis critical to recovery efforts of the lead federal agency, USAID, and the supporting response and recovery efforts of U.S. Pacific Command on behalf of the Department of Defense (DOD).

[Super Typhoon Haiyan Event Page](#): This page contains up to FOUO content and requires a GEOINT Online account or a DOD Common Access Card to access.

If you have a .mil or .gov e-mail address, you can self-register for an account [here](#). If you do NOT have a .mil or .gov e-mail address, but require access for official duties, you will need a sponsor. Please fill out the request form so NGA government POCs can sponsor you.
